

SUNCOAT

Application instructions for Suncoat Water-based Nail Polish

Suncoat Nail Polish performs differently to conventional polishes. When familiar with this gentle product, you will appreciate the benefits and how easy it is to use. To start, follow these simple guidelines:

- ❖ Wash your hands with soap and water and ensure that your nails are dry and free of any grease, dirt and hand cream.
- ❖ Apply thin coats and allow up to 60 seconds for the polish to dry between coats (drying time can be affected by humidity and temperature).
- ❖ 2 coats are usually applied but the colour intensity can be varied to your preference by applying 1- 4 thin coats. No base coat is required.
- ❖ Brush on with as many strokes as required. Allow the bristles to spread out for thin coverage. Although the polish may look streaky when applied, the polish will dry evenly to a more uniform colour.
- ❖ Apply Suncoat Crystal Clear Top Coat for greater resistance to chipping and for a longer-lasting professional-looking finish.
- ❖ Preferably avoid immersion in hot water (showers, baths, and washing dishes) for the first 4 hours after application as the polish continues to cure and harden. An ideal time to paint your nails is before bedtime.
- ❖ If the polish thickens with time, remove any dried lumps from around the top. Then add one drop of water and stir thoroughly. If necessary, add one more drop. The longer the nail polish bottle is open the greater the water evaporation.
- ❖ Remove the polish weekly with Suncoat Nail Polish Remover as the polish becomes more durable over time and therefore can be harder to remove.
- ❖ Store indoors at an ambient temperature. Do not leave the polish in the car during very hot or cold weather.

SUNCOAT

Application instructions for Suncoat Nail Polish Remover

This eco-friendly corn and soya-based remover has a gentle and moisturising action. It is recommended that you allow yourself some time and follow these steps for best results:

- ❖ Use the Nail Polish Remover to remove Suncoat Nail Polish weekly as the polish becomes harder to remove with time.
- ❖ This Remover is also effective for removing other brands of conventional nail polish.
- ❖ Please note that conventional removers do not work on Suncoat water-based Nail Polish.
- ❖ It is best to remove Suncoat Nail Polish after a bath, shower or soaking your nails in warm water. Then, apply Suncoat Remover on a cotton wool ball or pad, for up to 2 minutes per nail, to penetrate and soften the polish and then rub off.
- ❖ One well-soaked cotton ball should be enough to clean all your nails as the remover liquid evaporates slowly. Repeat if necessary. Wash your hands with soap and water.
- ❖ Whilst it is best to use Suncoat Remover, it is also possible to soak your nails in warm water for up to 10 minutes and gently peel off the polish using your fingernails or gently buff the remaining polish off.
- ❖ Suncoat Remover has a very low flammability compared to conventional removers. Keep in a cool and dry place, out of reach of children.
- ❖ As nails reflect your overall health, consult a healthcare practitioner or local manicurist for advice if your nails are in poor condition.
